

New series of mini outdoor motion sensors

Small is beautiful

Our range of outdoor motion sensors has been extended with a new series of mini detectors, 40% smaller than the DI601/DDI602 Series, especially focusing on residential applications:

- 6910P: wired PIR
- 6920P and 6921P: wired dual technology
- TX-2821-03-4: wireless PIR

The wired PIR 6910P uses two independent passive infrared detectors integrated into one housing.

The wired Dual Technology 6920P and 6921P has, in addition, a microwave sensor module which provides a higher level of detection as all three sensors (2 PIR's + microwave) must be activated in order to trigger an alarm.

The wireless variant TX-2821-03-4 will save any hassle with wires as it has the wireless 868AM Gen2 module, containing UTC Fire & Security's wireless protocol, on-board allowing a smooth integration with our range of wireless panels.

They all deliver extremely precise, reliable presence detection outdoors and can be smoothly integrated – due to their smaller appearance – into residential applications.

- 15m of detection range
- Variable mounting height up to 6m
- 14 to 70° detection angle
- 90° pan & 45° tilt for flexible install
- -30° (-25° for wireless PIR) to +65 °C operating temperature
- IP65 approved for dust & humidity resistance
- Neat & attractive design
- Easy to use masking sliders to tailor the field of view
- Discreet sensor module
